SHATHA AMMAR

Amman, Jordan · +962 77 634 3570 · Shathaammar407@gmail.com · LinkedIn · GitHub · Portfolio

PROFESSIONAL SUMMARY

Full Stack .NET Developer with 2+ years of professional experience building production-grade web applications using .NET Core, ASP.NET MVC, and Angular. Experienced in designing RESTful APIs, automated document workflows with OCR, and multi-role systems with complex business logic. Comfortable working independently in async/remote settings and collaborating across teams to deliver reliable, scalable solutions.

TECHNICAL SKILLS

Backend: .NET Core, ASP.NET MVC, C#, RESTful APIs, Entity Framework Core, JWT Auth
Frontend: Angular, TypeScript, JavaScript, HTML, CSS · React.js (additional)
Databases: SQL Server, PostgreSQL
Tools & Platforms: Git/GitHub, Laserfiche, Docker, AWS
Soft Skills: team collaboration, attention to details, fast learner, problem-solving

PROFESSIONAL EXPERIENCE

Full Stack .NET Developer | **Unlimited Innovation** Feb 2026 - Jun 2026 · Amman, Jordan

- Developed and maintained scalable web applications using .NET and Angular, integrating backend APIs with responsive frontends.
- Configured Laserfiche workflows and automated document processing pipelines using OCR, reducing manual processing time.
- Built RESTful APIs for data retrieval and CRUD operations, consumed by Angular dashboards.
- Collaborated with cross-functional teams in an agile environment to deliver client-facing solutions on schedule.

Full Stack .NET Developer | **Marmara for Modern Software** *Jul 2024 – Jan 2026 · Amman, Jordan*

- Developed full-stack web applications using .NET Core to support IoT-based vehicle tracking solutions.
- Built and maintained RESTful APIs that integrated with hardware devices and processed real-time data streams for live monitoring dashboards and automated reporting systems.
- Used PTC ThingWorx and PostgreSQL for data storage, retrieval, and operational efficiency in a production environment.

Full Stack .NET Developer (Trainee) | **Pioneers Academy** *Jun 2023 – Sep 2023 · Amman, Jordan*

- Completed intensive training covering C#, OOP, ASP.NET Core MVC, and SQL Server with hands-on CRUD application development.

EDUCATION

Bachelor's in Computer Engineering *Graduated - Jan 2023*
Hashemite University, Jordan

CERTIFICATIONS

Cisco Certified Network Associate (CCNA) · 2022
Full Stack Web Development – ASP.NET Core / MVC · 2023

PROJECTS

Training Management System — RESTful API & Multi-Role Platform

.NET Web API · EF Core · SQL Server · JWT Auth · AutoMapper · FluentValidation · 3-Tier Architecture · Repository Pattern

- Built a production-grade RESTful API to manage trainees, trainers, courses, enrollments, attendance, and grades with role-based authorization (Admin, Trainer, Trainee).
- Implemented 3-tier architecture with Repository Pattern and Unit of Work; enforced business rules such as course capacity limits, duplicate enrollment prevention, and attendance eligibility checks.
- Used AutoMapper for DTO mapping, FluentValidation for input validation, and global exception handling middleware for consistent error responses.
- Developed grade calculation logic (average, Pass/Fail), attendance percentage tracking per trainee, and course-level reporting with pagination and filtering support.

Task Management App — Angular 18 Frontend Application

Angular 18 · TypeScript · Reactive Forms · Angular Routing · LocalStorage

- Developed a single-page task management application with full CRUD operations — add, edit, delete, and view task details — using Angular 18 and reactive forms.
- Implemented search by title and filtering by status and priority; structured the app with a clean component-based architecture (TasksList, TaskForm, TaskDetails) backed by a dedicated TaskService.
- Added Arabic/English language toggle for bilingual UI support, with all data persisted via LocalStorage.

Blood Donation Management System — Healthcare Coordination Platform

ASP.NET MVC · C# · SQL Server · Role-Based Access Control · EF Core

- Built a multi-role blood donation management platform connecting donors, hospitals, and blood banks with centralized request and donation tracking.
- Implemented role-based access control (Admin, Donor, Hospital) with differentiated dashboards and permissions — admins approve/reject requests, donors track history, hospitals submit blood type requests with quantity.
- Designed database entities for users, donors, blood types, donations, and requests; enforced donation frequency constraints and blood type assignment logic.
- Developed reporting and statistics module showing total donors, donation counts, blood availability by type, and request status summaries.

Vehicle Explorer — Vehicle Discovery Application Live demo

.NET 8 Web API · Angular 18 · Docker · AWS EC2 · NHTSA vPIC API

– Built a full-stack vehicle explorer that lets users select a vehicle make and year and retrieve matching vehicle types and models through the NHTSA vPIC API.
– Designed the backend using a layered .NET 8 architecture and exposed RESTful endpoints consumed by an Angular 18 frontend.
– Containerized the frontend and backend with Docker, configured CORS and networking, and deployed the application to an AWS EC2 instance.
